Some players increase their base bet after a streak of non-Double outcomes (psychology-based "hot-hand" method).Statistically unimportant in seclusion, however can marginally improve ROI when integrated with a dynamic bet-sizing algorithm. **Bankroll Segmentation**Divide the overall bankroll into three "pockets": (i) Regular play, (ii) Bonus-focused, (iii) High-variance "all-in" for Crazy Time only.Allows disciplined risk management, avoiding a single unfortunate streak from eliminating the whole bankroll. **Timing the Host's "Big-Spin" Cue**The host periodically signals a "big spin" (e.g., by saying "Alright, let's get crazy!") which traditionally accompanies a slightly higher incidence of perk hits (≈ 0.5% increase).Exploiting this pattern can improve hit possibility, though it is not ensured and need to be used moderately.
