Gamers set a target multiplier (e.g., 5.00 x). The game then produces a random multiplier. If the generated multiplier is equivalent to or greater than the player's target, the bet wins. If it falls listed below the target, the bet is lost.

The appeal lies in the control it offers the player. You aren't responding to a moving chart in real-time; instead, you pre-select your danger tolerance and watch the results immediately.
