What Is a CS: GO Case Battle?

A **Case Battle** is a gamified form of skin betting where two or more gamers accept open the very same number of identical CS: GO cases at the very same time. Each gamer receives a random set of skins based on the case's built-in drop table. The aggregate market worth of the skins each player gets determines the winner:

- **Winner-takes-all:** The gamer with the greatest total worth wins the whole deposited amount (minus a home fee).
- **Split-prize:** Some formats divide the pot proportionally based upon the value each participant receives.

3. **Deposit Skins or Real Money**-- Most platforms accept either in-game skins (transformed to website credit) or fiat currency.

5. **Synchronised Opening**-- The platform runs the open animation for each player at the very same time.
6. **Worth Calculation**-- The system sums the marketplace cost of every skin obtained (utilizing real-time Steam market data).
7. **Payout**-- The winner receives the combined pot, minus a commission (normally 5-10%).

The "provably reasonable" algorithm used by reputable websites makes sure that the result can not be controlled after the battle begins.
