1. **Positioning:** The player selects where to falter from the top of the pyramid.
2. **The Bounce:** The ball takes a trip through a series of pegs, moving unexpectedly to the left or right.
3. **The Payout:** The ball lands in a slot at the bottom, which is designated a multiplier based upon the distance from the center.

Understanding Odds and Risk: The Strategy Table

One of the most crucial elements of contemporary Plinko is the capability to change the "danger level." Players can usually pick in between Low, Medium, and High volatility. The table below shows how these settings usually impact the gameplay experience.

Danger Level Volatility Possible Multipliers Win Frequency **Low** Very little Small (0.5 x-- 3x) Very High **Medium**
Moderate Well balanced (0.2 x-- 10x) Moderate **High** Severe Massive (0.0 x-- 1000x+) Low

- **High Risk:** This setting is for the "big game hunter." The possibility of landing a 1000x multiplier is considerably greater, but the possibility of hitting "dead" areas (multipliers less than 1.0 x) is equally high.
