What is CS Roulette?

At its core, CS Roulette is a digital betting video game inspired by standard casino roulette, however with a special twist: rather of wagering fiat currency like dollars or euros, participants use *Counter-Strike* weapon skins, knives, and gloves as security.

Third-party gaming websites host these video games. Players transfer their skins into the platform's bot inventory in exchange for site credits (often pegged to real-world worth, such as GBP or coins). These credits are then used to put wagers on a spinning wheel divided into colored sections-- typically red, black, and green.

How a Standard Round Works:

1. **Deposit:** The player deposits CS skins into the platform.
2. **Wager:** Players put their bets on several colors before the timer goes out.
3. **The Spin:** The digital wheel spins and arrive at a specific color.
4. **Payment:** If the gamer's selected color matches the winning section, their bet is increased based upon predefined chances. If they lose, the website keeps the credits.

Understanding the Wheel: Colors, Odds, and Payouts

To the inexperienced eye, CS Roulette looks like a game of pure possibility. While luck is certainly the main element, comprehending the mathematical circulation of the wheel is vital for anyone engaging with these platforms.

Most standard CS Roulette wheels include 15 segments, numbered 0 through 14.

Color	Segment Number	Number of Segments	Payout Ratio	Approximate Probability
Red	7 (e.g., 1-- 7)	2x	46.67%	
Black	7 (e.g., 8-- 14)	2x	46.67%	
Green	1 (e.g., 0)	14x	6.66%	

Why Green is your home Edge

The green segment (normally represented by the number absolutely no) is where the platform secures its mathematical benefit-- typically referred to as the **house edge**. Without this green segment, a red/black bet would be a completely fair 50/50 proposal.
