At the start of the round, the player puts a wager. The tower is displayed vertically, broken down into unique rows or levels. Each level consists of a specific variety of tiles or hidden alternatives. For instance, a tower might have rows of 3 tiles, where one tile conceals a trap, and the other 2 consist of multipliers.

- **Endure:** If they choose a safe tile, their payouts are multiplied, and they advance to the next row.

- **Best for:** Players with smaller bankrolls who want to extend their playtime.

2. The Risk-Reward Split

- **How it works:** Divide the bankroll into two categories. Usage 80% of the funds for safe, low-level climbs up, and reserve the remaining 20% for high-difficulty efforts aimed at hitting enormous multipliers.
- **The Goal:** Balance consistent build-up with the excitement of chasing a huge payout.

3. Martingale or Anti-Martingale (Progressive Betting)

- **The Martingale Approach:** Doubling the base wager after every loss. (Warning: This needs a substantial bankroll and can strike table limits quickly).
- **The Anti-Martingale Approach:** Increasing the bet a little after a win, and resetting to the base bet after a loss. This permits players to "ride a hot streak" without running the risk of core funds.
