The Core Premise

1. **Select a Bet Amount:** The player decides just how much they desire to wager on the upcoming round.
2. **Set a Target Multiplier:** The player inputs their preferred multiplier (e.g., 2.00 x, 10.00 x, or even 1,000,000 x).
3. **Roll the Dice:** The game engine generates a random multiplier.
4. **Win or Lose:** If the generated multiplier is *equal to or greater* than the target multiplier, the player wins. If it falls short, the bet is lost.

Your Home Edge

Like all casino games, Limbo is mathematically skewed in favor of your home. Your house edge usually varies between **1% and 3%**, depending upon the specific platform hosting the game. This edge is factored directly into the computation of the win probability.

Win Probability Formula

In Limbo, the theoretical opportunity of winning any offered round is inversely proportional to the target multiplier selected. The fundamental formula used by most platforms to identify the win chance is:

$$\text{Win Chance (\%)} = \frac{100\% - \text{House Edge (\%)}}{\text{Target Multiplier}}$$

For example, on a platform with a basic 1% house edge:

- If a gamer sets a target of **2.00 x**, their possibility of winning is approximately **49.5%**.
- If a player sets a target of **100x**, their possibility of winning drops to **0.99%**.

Anatomy of a Limbo Round: Risk vs. Reward

To visualize how various multipliers impact gameplay, think about the following breakdown of prospective scenarios in a standard Limbo game with a 1% house edge.

Target Multiplier	Theoretical Win Chance (%)	Payout on a £ 10 Bet	Danger Level
1.01 x	99.00%	£ 10.10	Very Low
2.00 x	49.50%	£ 20.00	Low/ Moderate
5.00 x	19.80%	£ 50.00	Moderate
10.00 x	9.90%	£ 100.00	High
50.00 x	1.98%	£ 500.00	Extremely High
1,000.00 x	0.099%	£ 10,000.00	Severe

As this table illustrates, Limbo enables players to customize their danger profile completely. A gamer looking for a high-frequency, low-variance session may stay with 1.5 x or 2.0 x multipliers. Alternatively, a gamer searching for a lottery-style excitement might target 1,000 x or higher.
