What is CS Roulette?

At its core, CS Roulette is a digital wagering game modeled after conventional European or American roulette found in physical gambling **CS2 Roulette** establishments. However, rather of betting fiat currency like US Dollars or Euros, individuals use *Counter-Strike* weapon skins as chips.

The principle is simple:

1. A player logs into a third-party betting site using their Steam qualifications.
2. The player deposits their in-game skins into the site's automated bot stock.
3. The site credits the player's account with an equivalent virtual balance based on the market value of the transferred skins.
4. The player uses this balance to position bets on a digital roulette wheel.

If they win, they can withdraw higher-value skins. If they lose, their transferred skins are gone.

How the Wheel Works: Mechanics and Types

While standard roulette features 37 or 38 pockets (numbered 0-36, plus 00 in American roulette), CS Roulette platforms typically make use of a simplified color-coded system to accelerate the speed of the game and boost engagement.
