Third-party betting websites host these video games. Gamers transfer their skins into the platform's bot stock in exchange for site credits (often pegged to real-world value, such as GBP or coins). These credits are then utilized to position wagers on a spinning wheel divided into colored sections-- generally red, black, and green.

How a Standard Round Works:

1. **Deposit:** The gamer deposits CS skins into the platform.
2. **Wager:** Players place their bets on several colors before the timer runs out.
3. **The Spin:** The digital wheel spins and arrive at a particular color.
4. **Payout:** If the player's selected color matches the winning section, their bet is increased based on predefined odds. If they lose, the site keeps the credits.

Red	7 (e.g., 1-- 7)	2x	46.67%	
Black	7 (e.g., 8-- 14)	2x	46.67%	
Green	1 (e.g., 0)	14x	6.66%
