The Game Theory Behind RSP

Mathematically, a pure, impartial game of Rock-Paper-Scissors has a Nash equilibrium where each player randomly picks Rock, Paper, or Scissors one-third of the time. Nevertheless, people are infamously bad at being truly random. Successful participants in RSP gaming typically research study behavioral patterns, such as:

- **Win-Stay, Lose-Shift:** Tendencies to repeat a winning toss or switch after a loss.
- **The Gambler's Fallacy:** Assuming that because "Rock" has appeared 3 times in a row, "Scissors" is due next.
- **Psychological Priming:** Exploiting how opponents respond under financial pressure.
