Roulette CS2 is a digital betting mini-game provided by a handful of third-party platforms that accept CS2 skins (or "tokens" derived from them) as stakes. Players position their skins on a virtual roulette table, pick a colour or a specific number, and enjoy a wheel spin in genuine time. The outcome is identified by a provably-fair algorithm that mirrors the 0-38 (European) or 0-00-38 (American) layout of standard roulette.

Feature	Standard Roulette	Roulette CS2
Betting units	Cash chips	CS2 skins, "skin-coins", or platform-specific tokens
Wheel layout	37 numbers (0-36)-- European; 38 numbers (0-36 + 00)-- American	Identical numerical layout; sometimes a "skin-only" wheel that collapses numbers into colour groups
Result confirmation	Physical wheel, dealership oversight	Cryptographically signed server seed + client seed (provably-fair)
House edge	2.7% (European)/ 5.26% (American)	Varies-- generally 2%-- 4% depending on platform & bet type

 - **Inside bets** (single number, split, street, corner, six-line)-- high payout, low probability.
 - **Outside bets** (red/black, odd/even, high/low, dozens, columns)-- lower payout, greater probability.
4. **Set the Stake**-- The gamer decides the number of "tokens" (each token = the financial value of a single deposited skin) to bet on each picked outcome.
5. **Spin the Wheel**-- The site generates a *server seed* and shares its hash with the player; the gamer then supplies a *customer seed*. The combined seeds produce a random number that figures out the winning slot.
