The Mechanics of RPS Gambling

At its core, Rock Paper Scissors is a zero-sum video game played all at once. Each player picks one of three shapes: Rock (a closed fist), Paper (a flat hand), or Scissors (a fist with the index and middle fingers extended).

- **Rock** crushes Scissors.
- **Scissors** cuts Paper.
- **Paper** covers Rock.

In a purely theoretical, perfectly randomized match, the odds of winning, losing, or tying are equivalent for both players:

Outcome Probability (per round) **Win** 33.33% (£ 1/3 £) **Loss** 33.33% (£ 1/3 £) **Tie** 33.33% (£ 1/3 £)

Human brains respond predictably depending on the result of the previous round:

- **If a gamer wins**, they tend to stick with the winning toss or move sequentially to the item that beats what their challenger *just* threw.
- **If a gamer loses**, they tend to change away from their losing throw immediately, typically transitioning to the item that *would have* beaten their challenger's last move.
- **If there is a tie**, gamers regularly change within the next round to avoid duplicating themselves.
